Week 1

The history and introduction to HCI
H C I

Human-computer interaction (HCI)

Bidang khusus dalam **ilmu komputer** yang

mempertimbangkan aspek interaksi manusia

Start 1980

1946 - 1970

v

HISTORY

WHERE HCI CAME FROM

1970s

Until the late 1970s, the only humans who interacted with computers were information technology professionals and dedicated hobbyists.
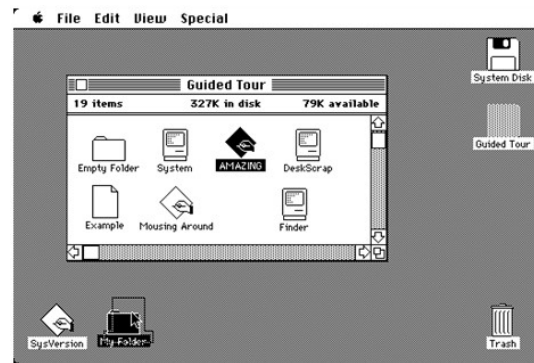

No HCI

WHERE HCI CAME FROM

Setelah 1970

The development of computer science is really immense, there are so many software and applications launched to be used by any person. It makes anyone able to use computer.
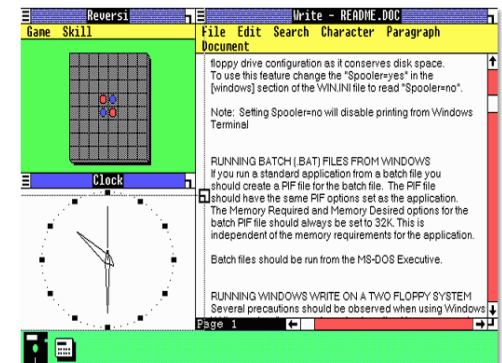

Beginning of HCI

WHERE HCI CAME FROM

1973 – Xerox Alto

1984 – Apple Macintosh

**1985 – Windows 1.0**

H C I
H C I

H C I

HCI

1970   1980   1999   . . .   *Sekarang*

Mengalami perkembangan yang pesat sehingga dilakukan reartikulasi secara terus menerus sehingga memiliki makna yang sangat kaya

HCI

is the name for a community of communities

v

→ **INTERACTION DESIGN**
→ **USER INTERFACE**
→ **USER EXPERIENCE**
→ **CONCEPTUAL MODEL**

Elevator controls and labels on the bottom row all look the same, so it is easy to push a label by mistake instead of a control button

www.baddesigns.com

People do not make same mistake for the labels and buttons on the top row. Why not?

Why is this vending machine so bad?

www.baddesigns.com

Need to **push button first** to activate reader

Normally **insert bill** first before making selection

Contravenes well known convention

Marble answering machine (Bishop, 1995)

Based on how everyday objects behave

Easy, intuitive and a pleasure to use

Only requires one-step actions to perform core tasks

GOOD AND BAD DESIGN

Why is the TiVo remote so much better designed than standard remote controls?

- Peanut shaped to fit in hand
- Logical layout and color-coded, distinctive buttons
- Easy to locate buttons

See:

http://gizmodo.com/5017972/story-of-a-peanut-the-tivo-remotes-untold-past-present-and-future

GOOD AND BAD DESIGN

Which is the best way to interact with a smart TV?

- Standard remote device?
- Apple slimline remote control?
- Minnum's new keyboard?

WHAT TO DESIGN

Need to take into account:

- Who the users are
- What activities are being carried out
- Where the interaction is taking place

Need to optimize the interactions users have with a product:

- So that they match the users' activities and needs

Understanding users' needs

Need to take into account what people are good and bad at

Consider what might help people in the way they currently do things

Think through what might provide quality user experiences

Listen to what people want and get them involved

Use tried and tested user-centered methods

What is interaction design?

"Designing interactive products to support the way people communicate and interact in their everyday and working lives."

Preece, Sharp and Rogers (2015)

"The design of spaces for human communication and interaction."

Winograd (1997)

Goals of interaction design

Develop usable products

- Usability means easy to learn, effective to use and provide an enjoyable experience

Involve users in the design process

Which kind of design?

Number of other terms used emphasizing what is being designed, e.g.

- user interface design, software design, user-centered design, product design, web design, experience design (UX)

Interaction design is the umbrella term covering all of these aspects

- fundamental to all disciplines, fields, and approaches concerned with researching and designing computer-based systems for people
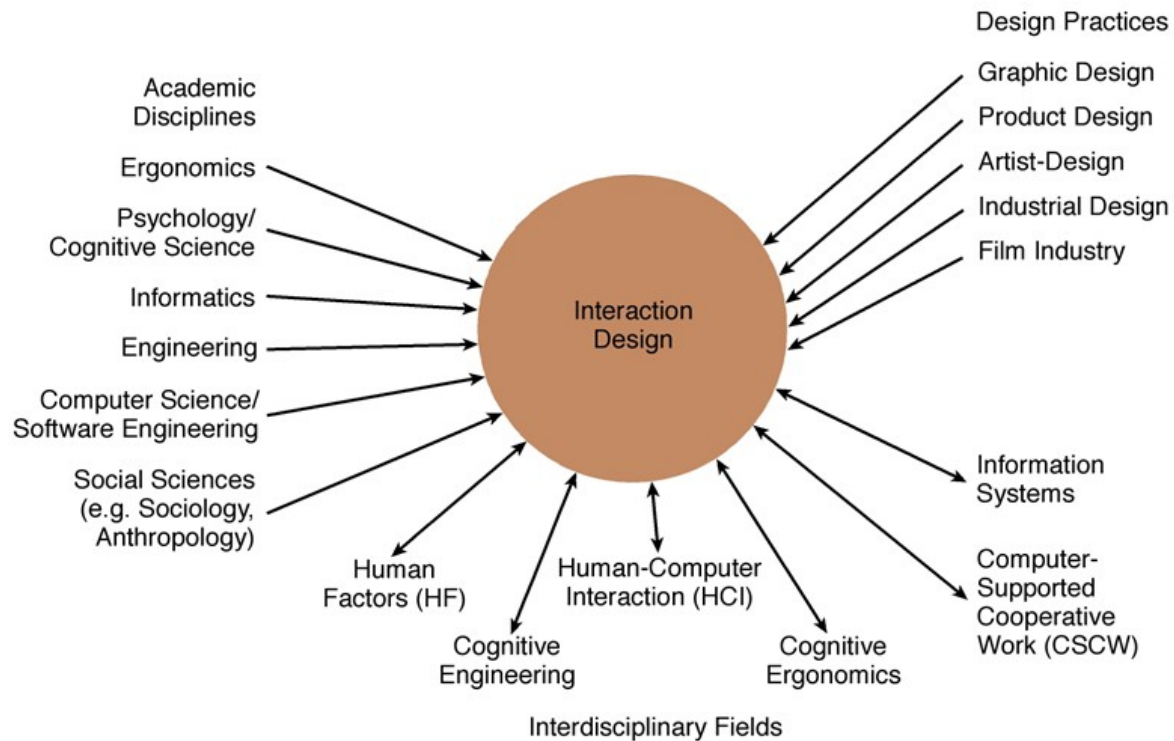

Relationship between ID, HCI and other fields

Academic disciplines contributing to ID:

- Psychology
- Social
- Sciences
- Computing
- Sciences
- Engineering
- Ergonomics
- Informatics

Relationship between ID, HCI and other fields

Design practices contributing to ID:

- Graphic Design
- Product design
- Artist-design
- Industrial design
- Film industry

Relationship between ID, HCI and other fields

Interdisciplinary fields that 'do' interaction design:

- HCI
- Ubiquitous Computing
- Human Factors
- Cognitive Engineering
- Cognitive Ergonomics
- Computer Supported Co-operative Work
- Information Systems

Working in multidisciplinary teams

Many people from different backgrounds involved

Different perspectives and ways of seeing and talking about things

Benefits

- more ideas and designs generated

Disadvantages

- difficult to communicate and progress forward the designs being create

Interaction design in business

Increasing number of ID consultancies, examples of well known ones include:

Nielsen Norman Group: "help companies enter the age of the consumer, designing human-centered products and services"

Cooper: "From research and product to goal-related design"

Swim: "provides a wide range of design services, in each case targeted to address the product development needs at hand"

IDEO: "creates products, services and environments for companies pioneering new ways to provide value to their customers"

What do professionals do in the ID business?

interaction designers

people involved in the design of all the interactive aspects of a product

usability engineers

people who focus on evaluating products, using usability methods and principles

web designers

people who develop and create the visual design of websites, such as layouts

information architects

people who come up with ideas of how to plan and structure interactive products

user experience designers (UX)

people who do all the above but who may also carry out field studies to inform the design of products

The User Experience

How a product behaves and is used by people in the real world

- the way people feel about it and their pleasure and satisfaction when using it, looking at it, holding it, and opening or closing it
- "every product that is used by someone has a user experience: newspapers, ketchup bottles, reclining armchairs, cardigan sweaters." (Garrett, 2010)
- "all aspects of the end-user's interaction with the company, its services, and its products. (Nielsen and Norman, 2014)

Cannot design a user experience, only design for a user experience

www.baddesigns.com

Figure 1.6 The iPod Nano Touch
Source: ©Press Association, reproduced with permission.

Quality user experience from the start

Simple, elegant, distinct brand, pleasurable, must have fashion item, catchy names, cool, etc

What is involved in the process of interaction design

Establishing requirements

Developing alternatives

Prototyping

Evaluating

Core characteristics of interaction design

Users should be involved through the development of the project

Specific usability and user experience goals need to be identified, clearly documented and agreed at the beginning of the project

Iteration is needed through the core activities

Why go to this length?

Help designers:

- understand how to design interactive products that fit with what people want, need and may desire
- appreciate that one size does not fit all e.g., teenagers are very different to grown-ups
- identify any incorrect assumptions they may have about particular user groups e.g., not all old people want or need big fonts
- be aware of both people's sensitivities and their capabilities

Are cultural differences important?

5/21/2015 versus 21/5/2015?

● Which should be used for international services and online forms?

Why is it that certain products, like the iPod, are universally accepted by people from all parts of the world whereas websites are reacted to differently by people from different cultures?

Accessibility

Degree to which a product is usable and accessible by as many people as possible

Focus on disability:

- Have a mental or physical impairment
- This has an adverse affect on their everyday lives
- It is long term

Designed to be different for UK and US customers

What are the differences and which is which?

What should Anna's appearance be like for other countries, like India, South Africa, or China?

Figure 1.7 Anna the online sales agent, designed to be subtly different for UK and US customers. What are the differences and which is which? What should Anna's appearance be like for other countries, like India, South Africa, or China?

Usability goals

Effective to use

Efficient to use

Safe to use

Have good utility

Easy to learn

Easy to remember how to use

User experience goals

Desirable aspects

- Satisfying
- helpful
- fun
- enjoyable
- motivating
- provocative
- engaging
- challenging
- surprising
- pleasurable
- enhancing
- sociability
- rewarding
- exciting
- supporting
- creativity
- emotionally
- fulfilling
- entertaining
- cognitively
- stimulating

Undesirable aspects

- Boring
- Unpleasant
- Frustrating
- Patronizin
- making one feel guilty
- making one feel stupid
- Annoying
- Cutesy
- Childish
- gimmicky

Usability and user experience goals

Selecting terms to convey a person's feelings, emotions, etc., can help designers understand the multifaceted nature of the user experience

How do usability goals differ from user experience goals?

Are there trade-offs between the two kinds of goals?

- e.g. can a product be both fun and safe?

How easy is it to measure usability versus user experience goals?

Design principles

Generalizable abstractions for thinking about different aspects of design

The do's and don'ts of interaction design

What to provide and what not to provide at the interface

Derived from a mix of theory-based knowledge, experience and common-sense

www.baddesigns.com

This is a control panel for an elevator

How does it work?

Push a button for the floor you want?

Nothing happens. Push any other button? Still nothing. What do you need to do?

It is not visible as to what to do!

Visibility

www.baddesigns.com

...you need to insert your room card in the slot by the buttons to get the elevator to work!

How would you make this action more visible?

- Make the card reader more obvious
- Provide an auditory message, that says what to do (which language?)
- Provide a big label next to the card reader that flashes when someone enters
- Make relevant parts visible
- Make what has to be done obvious

Invisible automatic controls can make it more difficult to use

Figure 1.10 A sign in the restrooms at Cincinnati airport. Because it is not visible to the user as to what to do to turn the faucet (tap) on and off, a sign has been added to explain what is normally an everyday and well-learned activity. It does not explain, however, what to do if you are wearing black clothing
Feedback

Sending information back to the user about what has been done

Includes sound, highlighting, animation and combinations of these

- e.g. when screen button clicked on provides sound or red highlight feedback:

Previous ⟶ "ccclichhk"

Previous ⟶ Previous

Constraints

Restricting the possible actions that can be performed

Restricting the possible actions that can be performed

Physical objects can be designed to constrain things

- e.g. only one way you can insert a key into a lock

Logical or ambiguous design?

Where do you plug the mouse?

Where do you plug the keyboard?

top or bottom connector?

**Do the color coded icons help?**

www.baddesigns.com

How to design them more logically

A provides direct adjacent mapping between icon and connector

www.baddesigns.com

B provides color coding to associate the connectors with the labels

www.baddesigns.com

Consistency

Design interfaces to have similar operations and use similar elements for similar tasks

For example:

- always use ctrl key plus first initial of the command for an operation – ctrl+C, ctrl+S, ctrl+O

Main benefit is consistent interfaces are easier to learn and use

When consistency breaks down

What happens if there is more than one command starting with the same letter?

- e.g. save, spelling, select, style

Have to find other initials or combinations of keys, thereby breaking the consistency rule

- e.g. ctrl+S, ctrl+Sp, ctrl+shift+L

Increases learning burden on user, making them more prone to errors

Internal and external consistency

Internal consistency refers to designing operations to behave the same within an application

- Difficult to achieve with complex interfaces

External consistency refers to designing operations, interfaces, etc., to be the same across applications and devices

- Very rarely the case, based on different designer's preference

Keypad numbers layout

A case of external inconsistency

(a) phones, remote controls

(b) calculators, computer keypads

Affordances: to give a clue

Refers to an attribute of an object that allows people to know how to use it

- e.g. a mouse button invites pushing, a door handle affords pulling

Norman (1988) used the term to discuss the design of everyday objects

Since has been much popularised in interaction design to discuss how to design interface objects

- e.g. scrollbars to afford moving up and down, icons to afford clicking on

What does 'affordance' have to offer interaction design?

Interfaces are virtual and do not have affordances like physical objects

Norman argues it does not make sense to talk about interfaces in terms of 'real' affordances

Instead interfaces are better conceptualized as 'perceived' affordances

- Learned conventions of arbitrary mappings between action and effect at the interface
- Some mappings are better than others

Activity

Virtual affordances

- How do the following screen objects afford?
- What if you were a novice user?
- Would you know what to do with them?

Up Arrow →

Elevator Button

Down Arrow →
Key points

Interaction design is concerned with designing interactive products to support the way people communicate and interact in their everyday and working lives

It is concerned with how to create quality user experiences

It requires taking into account a number of interdependent factors, including context of use, type of activities, cultural differences, and user groups

It is multidisciplinary, involving many inputs from wide-reaching disciplines and fields
